LinkedIn — GitHub — Portfolio

Profile

Computer Science Engineering student with strong expertise in Java, Data Structures, and Object-Oriented Programming. Skilled in building scalable backend systems, AI-powered automation platforms, and intelligent job workflow systems using Spring Boot, REST APIs, Chrome Extensions, and PostgreSQL. Experienced in full stack development with React.js, modern UI frameworks, browser automation, and cloud deployment. Passionate about developing production-ready AI systems that automate real-world workflows.

Technical Skills

Languages: Java, JavaScript, SQL

Frameworks: Spring Boot, Spring MVC, Hibernate, Spring Security

Frontend: React.js, HTML, CSS, Tailwind CSS, JSP

Backend: REST API Development, Microservices Architecture, JWT Authentication, Multipart File Handling

AI & Tools: AI API Integration, Prompt Engineering, Resume Parsing, LLM Integration (Ollama), AI Matching Systems, Cover Letter Automation

Database: PostgreSQL (Supabase), JDBC

Browser Automation: Chrome Extension Development, DOM Manipulation, Content Scripts, Autofill Automation

Tools: Git, GitHub, Maven, VS Code, Postman

Concepts: OOP, Data Structures, MVC Architecture, API Design, Scalable Systems, Job Automation Pipelines

Cloud & Deployment: Render, Netlify, Supabase

Projects

Job Agent AI – AI-Powered Smart Job Matching & Chrome Auto-Apply Platform

GitHub

- Architected a full-stack AI-powered job automation system that parses resumes, extracts skills, matches users with relevant jobs, and generates personalized cover letters.
- Built scalable backend using Spring Boot, Hibernate, PostgreSQL (Supabase), and REST APIs for resume upload, AI job scoring, skill-gap analysis, and automated job workflows.
- Integrated local LLM (Ollama/Phi) for AI-powered resume parsing, match scoring, apply decisioning, cover letter generation, and skill-gap intelligence.
- Developed React.js dashboard for resume upload, AI match visualization, job analytics, and intelligent job pipeline monitoring.
- Engineered Chrome Extension for LinkedIn, Indeed, Naukri, Wellfound, Bayt, and remote job platforms to autofill applications with AI-generated personalized data.
- Implemented browser automation using content scripts, popup architecture, DOM selectors, and Chrome storage for multi-platform smart apply.
- Designed end-to-end job pipeline including job fetching, AI evaluation, smart recommendations, and one-click assisted applications.

AI Image Studio – AI-Powered Image Generation Platform

Live Demo — GitHub

- Developed a full-stack AI-powered application that generates high-quality images from user prompts.
- Integrated external AI APIs to enable real-time image generation and dynamic content delivery.
- Built responsive and interactive UI using React.js and Tailwind CSS.
- Designed scalable backend architecture to handle API requests and optimize performance.
- Implemented clean UI/UX for seamless user interaction and fast rendering.

Linklytics – Scalable URL Shortener (Bitly Clone)

Live Demo — Backend API — GitHub

- Engineered a full-stack URL shortening platform using Spring Boot and React.js.
- Designed RESTful APIs for URL creation, redirection, and analytics tracking.
- Integrated Supabase (PostgreSQL) for scalable and real-time data operations.
- Implemented efficient URL redirection using unique short codes.
- Secured application using JWT authentication and Spring Security.
- Deployed production-ready system on Render and Netlify.

Experience

Intern – Analyze Infotech, Lucknow

- Worked on backend development using Java and Spring Boot.
- Assisted in REST API development, testing, and debugging.
- Optimized database queries to improve application performance.
- Collaborated using Git in a team-based agile environment.

Education

Bachelor of Technology (B.Tech) – Computer Science and Engineering

Integral University, Lucknow

Expected 2026
